

### Product Number: 20 Electrical Unit Protection SLM – Insulation Liner

#### **Description:**

Insulation liner to prevent the metal consumer unit from becoming live due to loose connections and live supply touching the case.

#### **Use:**

Metal consumer units pose a great risk of becoming live due to overheated cables loosening up and touching the box which hasn't been properly earthed. Therefore there is a need for an insulation material to be placed inside the unit to prevent this from happening.

Envirograf® insulation liners consist of a silicone cloth material which should be fitted to the back of the unit using the attached double sided tape. There are 4 sizes available. The material can be easily cut or trimmed, if required using scissors.
